

## GigE+ Fiber Optic Network

Delivered by Independents Fiber Network

### High Performance Network for High Performance Learning.

Educators are always seeking new and innovative ways to improve the learning experience and results. From grade schools to higher education institutions, reliance on technology for the optimal learning experience is increasing. Whether your goal is to provide access to online learning applications, connect to multiple locations, implement security surveillance, share databases or reduce communication costs — you will need a reliable network you can count on.

Our GigE+ Fiber Optic Network can provide you with the data connectivity you need to reach your goals and stay connected. Our experts understand that online learning, video conferencing and database connections require increasingly more bandwidth and that you also have a budget to work with. However, with the assistance of the E-rate program that helps schools defray the cost of communication services, getting the fiber network connectivity you need may be easier than you think.

### Connecting Ohio Educators with Technology.

Information Technology Centers such as Northwest Ohio Area Computer Services Cooperative (NOACSC) help provide much needed technology to schools in an affordable way. Executive Director, Ray Burden of NOACSC, a customer of Independents Fiber Network, knows firsthand how rapidly the use of technology in schools has evolved.

“The GigE+ network has provided much needed fiber to schools, giving them the bandwidth for online learning applications, high definition video and the ability to access dynamic content such as YouTube”, explained Burden at NOACSC.

“We’ve been working with the experts at Independents Fiber Network for over six years and they have been providing us with technology advice on a consultative basis which we really value. They were willing to run their own fiber in our rural areas and worked cooperatively with others to meet our specific needs. We’re impressed with their service and have recommended them to other organizations many times,” noted Burden.
